

5 STAGE MASTER FILTER

无烟煤(荷兰/澳洲) **5 STAGE**
 Anthracite(Holland/Australia)
 矿煤的重要工作在于网罗沉渣,同一时候能留下水中10%至25%的氯,因为氯需要保留以延续消毒,以利于水槽内食水的抑菌作用。
 While trapping the sediments, being the primary function of the carbon, it leaves 10% to 25% the chlorine in the water to give bacteria-static benefit to the water in the water tank.

细沙 **3 STAGE**
 Fine Gravel
 能吸附水中杂物
 Removes dirt and prevent diseases such as Typhoid, Cholera, Bihdryia and Amoneba.

粗沙 **1 STAGE**
 Corse Gravel
 作为底床支撑,能平衡水质于弱碱性及保留氧气和维持良好水质。
 Underbed support, to balance the pH and increase oxygen content and restoration of water quality

火山矿石过滤媒体(澳洲)
 Zeolite(Australia) **4 STAGE**
 有效吸附有害液体,滤除重金属,如铅和铬等。过滤泥浆,杂质,改善水质,增强反冲洗
 It is a naturally occurring mineral rock, formed when mineral-rich underground water deposits crystalize. Its porous crystalline structure provides advanced filtration properties and possesses a unique capacity to adsorb ammonia and various ionic species(metal ions, calcium, magnesium ets).

西沙硅砂幼级优级
 Fine Sand **2 STAGE**
 在硅砂表面进一步分离细小脏物
 Further trapping of very fine sediment at the surface if fine silica sand.
