## 7 STAGE MASTER FILTER

Birm

7 STAGE

减少水中铁质 absorbing iron in water

无烟煤(荷兰/澳洲) 5 STAGE Anthracite(Holland/Australia) 矿煤的重要工作在于网罗沉渣,同一时候能留下水中10%至25%的氯,因为氯需要保留以延续消毒,以利于水槽内食水的抑菌作用。

While trapping the sediments, being the primary function of the carbon, it leaves 10% to 25% the chlorine in the water to give bacteria—static benefit to the water in the water tank.

细沙

3 STAGE

Fine Gravel 能吸附水中杂物

Removes dirt and prevent diseases such as Typhoid, Cholera, Bihdryia and Amoneba.

粗沙

1 STAGE

Corse Gravel 作为底床支撑,能平衡水质 于弱碱性及保留氧气和维持 良好水质。

Underbed support, to balance the pH and increase oxygen content and restoration of water quality

Bio Energy Ball

6 STAGE

增加水能量

**Increase Engergy** 

火山矿石过滤煤体(澳洲) 4 STAGE Zeolite(Australia) 有效吸附有害液体,滤除重 金属,如铅和铭等。过滤泥浆, 杂质,改善水质,增强反冲洗 It is a naturally occurring mineral rock, formed when mineral-rich underground water deposits crytalize. Its porous crystalline structure provides advanced filtration properties and possesses a unique capacity to adsorb ammonia and various ionic species(metal ions, calcium, magnesium ets).

西沙硅砂幼级优级

Fine Sand <u>2 STAGE</u> 在硅砂表面进一步分离细 小脏物

Further trapping of very fine sediment at the surface if fine silica sand.
